

NS3503-16P-4C FAQ

[Question]

Could NS3503-16P-4C output 60 watts no mater what PoE device was connected?

[Answer]

No - if the PoE device doesn't have same technology as the NS3503-16P-4C it may not support 60 watts power output.

If you connect an 802.3-at PoE device, NS3503-16P-4C will support 30 watts power maximum.

The NS3503-16P-4C offers pre-PoE-bt support (soon to be ratified IEEE standard).
